

Secure and protect your supply chain from cyber threats and avoid costly data breaches.

Challenges

Understanding cybersecurity risk is crucial for preventing data breaches, operational disruptions, reputational damage, compliance violations, and financial losses. This becomes increasingly challenging due to the constantly evolving nature of cyber threats, complex and interconnected supplier networks, diverse cybersecurity standards, dependencies on third parties, and limited visibility into supplier practices.

Craft helps you identify at-risk companies within your supply chain, even revealing hidden threats among your supplier's suppliers, so you can quickly and effectively mitigate risk and prevent costly disruption.

Cyber Data Tracked

Quickly evaluate suppliers risk with easy-to-understand cybersecurity scores and individual issues reports that include score history and customized guidance for improvement. Scores for specific threat indicators, include:

- Network security
- Application security
- DNS Health
- Patching cadence
- Endpoint security
- Hacker chatter and more

DID YOU KNOW?

Cyber attacks increased **125% in 2021**, and another **40% in 2022**¹

The average cost of a data breach has exceeded **\$9.4 million**²
